

Virtual Workshop Series

BOSTON REGION URBAN FOREST CLIMATE ADAPTATION

The [Northern Institute of Applied Climate Science](#), in partnership with [American Forests](#), is offering an *Urban Forest Climate Adaptation Workshop Series* tailored to the greater Boston Region. **Participants will be empowered to integrate climate adaptation into real-world urban forest planning and activities.** They will consider how the ongoing and projected climate changes for the region are likely to impact the urban forest, learn about the adaptability & vulnerability of the region's tree species to climate change, and apply a climate adaptation planning process to their own real-world project.

This unique opportunity provides direct training in considering climate change information and identifying adaptation actions using NIACS' [Quick Guide to Adaptation Planning](#). We will also use the new *Boston Region: Tree Species Vulnerability Assessment* and other urban forestry adaptation resources co-developed by NIACS and American Forests. **Participants will receive coaching and feedback on their own real-world climate adaptation project!**

PARTICIPANTS WILL:

- Understand how climate adaptation and mitigation fit into stewardship of the urban forest.
- Identify locally-important climate change impacts, challenges, and opportunities.
- Use the *Quick Guide to Adaptation Planning* to support their own "climate-informed" urban forestry projects
- Utilize results from the new *Boston Region: Tree Species Vulnerability Assessment*
- Better communicate with stakeholders about climate impacts and adaptation responses
- Access post-training support from NIACS staff during project planning and implementation

DETAILS

DATES

Three 1.5-hour Zoom sessions starting at 3pm EST

Mon. November 7th

Mon. November 14th

Tues. November 29th

AUDIENCE

This workshop is intended for individuals or teams working in or adjacent to urban and community forestry in the Boston Region, including, but not limited to: urban forestry professionals, city staff, planners and landscape architects, private consultants, extension employees, environmental and conservation non-profits, and community members.
