Questions and requests for updates can be directed to Leslie Brandt (lbrandt@fs.fed.us), Northern Institute of Applied Climate Science

This session is being organized by the Northern Institute of Applied Climate Science, US Forest Service, and Holden Arboretum.

April 20: Preparing for Climate Change

Urban and community forestry professionals face the tremendous challenge of developing and implementing management actions that help urban forests respond to climate change. This session will:

- Provide information on the current and anticipated effects of climate change on northeastern Ohio and its urban forests and natural areas
- Describe resources and tools that can be used to integrate climate change into urban forest management
- Outline adaptation concepts and strategies in the context of sustainable forest management
- Identify actions that enhance the ability of urban forests to adapt to changing conditions
- Highlight real-world examples of adaptation projects and engage in a variety of interactive activities to identify climate change issues and potential adaptation actions.

April 21: Forest Adaptation Planning & Practices

This active, hands-on training will be held for a limited number of participants. Natural resource managers will incorporate climate change considerations and identify actions for adaptation into their own real-world forest management projects. Contact Leslie Brandt (lbrandt@fs.fed.us) to request additional information or inquire about attendance.

The Climate Change Response Framework is a core forest adaptation
